

FICUS CARICA

'TEXAS EVERBEARING'

Texas Everbearing Fig

Why we love it...

Figs are mentioned in many of our earliest texts, as these broad, deciduous trees have been in cultivation for thousands of years. The fig tree's leaf, in particular, is a widely familiar shape that has provided some of the world's most famous statues and paintings with strategic covering and a modicum of modesty. In the landscape, these large, deeply lobed leaves provide a coarse texture and cast dense shade. The tree itself is usually short but wide in stature with smooth, silvery bark, multiple trunks, and a remarkable tolerance of desert heat and sun.

'Texas Everbearing' produces 2 delicious crops of mildly sweet, nearly seedless, medium-sized fruit each year; the first ripens in late May or June, and the second follows in late September to early November. This dark-skinned fruit is often compared to 'Brown Turkey' in appearance and taste, but the flesh of 'Texas Everbearing' has more amber tones and the tree has a more upright form.

Lydia says: Fig trees have a milky sap that can irritate skin if not washed off promptly. Wear gloves when picking fruit or pruning, and avoid burning the wood in fireplaces or bonfires.

Deciduous Fruiting Tree: *Ficus carica* 'Texas Everbearing'

Size (H x W): 15-30 feet x 15-30 feet

Fruit: 2 crops per year, pink/amber flesh, brown to purple skin

Exposure: Full sun to part shade

Hardiness Zone: 15° F, USDA Zone 8

Water: Moderate

Pruning: January

Growth Rate: Moderate to fast

This plant is included in our Civano Edibles™ collection. Civano Edibles™ are handpicked by our horticulturalist for quality, form and health!
